# *Andryala pinnatifida*

## Fruit, seed and dispersal

Dispersal mode: **Anemochory**
Dispersal distance class: **3**

## Trophic mode

Parasitism and mycoheterotrophy: **autotroph**
Carnivory: **non-carnivorous**
Symbiotic nitrogen fixation: **no nitrogen-fixing symbionts**

## Taxon origin

Origin in Europe: **Native**

## Habitat and sociology

### EUNIS habitat

Diagnostic species of EUNIS habitats: **R53 Macaronesian thermophilous forest fringe**, **S76 Canarian mountain hedgehog-heath**, **T28 Macaronesian heathy forest**
Constant species of EUNIS habitats: **R53 Macaronesian thermophilous forest fringe**, **S76 Canarian mountain hedgehog-heath**, **T28 Macaronesian heathy forest**

### Broad habitat

Occurrence in broad habitats: **Grassland (non-alpine, non-saline), Oromediterranean scrub, Forest**
