

Anoda cristata

Habitus and growth type

Plant height [m]: **0.78**

Life span: **Annual**

Life form: **Therophyte**

Flower

Flowering period: **June-October**

Fruit, seed and dispersal

Seed mass [mg]:

Trophic mode

Parasitism and mycoheterotrophy: **autotroph**

Carnivory: **non-carnivorous**

Symbiotic nitrogen fixation: **no nitrogen-fixing symbionts**

Taxon origin

Origin in Europe: **neophyte**

Habitat and sociology

Broad habitat

Occurrence in broad habitats: **Wetland, Scrub**
