Hieracium subpellucidum

Fruit, seed and dispersal

Dispersal mode: **Anemochory**

Trophic mode

Parasitism and mycoheterotrophy: **autotroph**
Carnivory: **non-carnivorous**
Symbiotic nitrogen fixation: **no nitrogen-fixing symbionts**

Taxon origin

Origin in Europe: **native**

Ecology

Disturbance indicator values

Disturbance frequency: **0.02**
Disturbance frequency (herb layer): **1.34**
Disturbance severity: **0.7**
Disturbance severity (herb layer): **0.1**
Mowing frequency: **0**
Grazing pressure: **0.2**
Soil disturbance: **0.12**
