Odontites jaubertianus

Habitus and growth type

Life span: **Annual**
Life form: **Therophyte**

Fruit, seed and dispersal

Dispersal mode: **Local non-specific dispersal**

Trophic mode

Parasitism and mycoheterotrophy: **euphytoid hemiparasite**
Carnivory: **non-carnivorous**
Symbiotic nitrogen fixation: **no nitrogen-fixing symbionts**

Taxon origin

Origin in Europe: **native**

Ecology

Disturbance indicator values

Disturbance frequency: **1.2**
Disturbance frequency (herb layer): **1.79**
Disturbance severity: **0.52**
Disturbance severity (herb layer): **0.49**
Mowing frequency: **0.77**
Grazing pressure: **0.26**
Soil disturbance: **0.16**
