Justicia adhatoda

Habitus and growth type

Plant height [m]: **1.83**

Leaf

Specific leaf area [mm^2/mg]: **12.04**

Flower

Flowering period: **May-July**

Trophic mode

Parasitism and mycoheterotrophy: **autotroph**
Carnivory: **non-carnivorous**
Symbiotic nitrogen fixation: **no nitrogen-fixing symbionts**

Taxon origin

Origin in Europe: **neophyte**

Habitat and sociology

Broad habitat

Occurrence in broad habitats: **Scrub**
