

Senecio angulatus

Habitus and growth type

Plant height [m]: **3.23**

Life span: **Perennial**

Life form: **Phanerophyte, Woody liana**

Flower

Flowering period: **July-October**

Fruit, seed and dispersal

Dispersal mode: **Anemochory, Anthropochory**

Dispersal distance class: **7**

Trophic mode

Parasitism and mycoheterotrophy: **autotroph**

Carnivory: **non-carnivorous**

Symbiotic nitrogen fixation: **no nitrogen-fixing symbionts**

Taxon origin

Origin in Europe: **Neophyte**
