Tragopogon heterospermus

Habitus and growth type

Life span: **Biennial or short-lived**
Life form: **Hemicryptophyte**

Fruit, seed and dispersal

Dispersal mode: **Anemochory**
Dispersal distance class: **5**

Trophic mode

Parasitism and mycoheterotrophy: **autotroph**
Carnivory: **non-carnivorous**
Symbiotic nitrogen fixation: **no nitrogen-fixing symbionts**

Taxon origin

Origin in Europe: **Native**

Ecology

Disturbance indicator values

Disturbance frequency: **1.93**
Disturbance frequency (herb layer): **1.96**
Disturbance severity: **0.38**
Disturbance severity (herb layer): **0.36**
Mowing frequency: **0.08**
Grazing pressure: **0.16**
Soil disturbance: **0.6**
