Viola sororia

Habitus and growth type

Plant height [m]: **0.14**

Leaf

Specific leaf area [mm^2/mg]: **21.89**

Fruit, seed and dispersal

Dispersal mode: **Myrmecochory, Anthropochory**
Dispersal distance class: **3, 7**

Trophic mode

Parasitism and mycoheterotrophy: **autotroph**
Carnivory: **non-carnivorous**
Symbiotic nitrogen fixation: **no nitrogen-fixing symbionts**

Taxon origin

Origin in Europe: **Neophyte**
